# pylint

Pylint is a code, bug, and quality checker for Python, following the style recommendations by the Python style guide (PEP 8). It is very useful when working as a team, so that everyone follows the same guidelines.

```
pip install pylint
```

Run from console:

```
C:\... path> pylint module1.py -r y
```

python file to evaluate

Pylint returns a report with the characteristics that were evaluated, errors and partial scores.

Your code has been rated at 6.67/10

```
Your code has been rated at 6.67/10
```

The higher the score, the higher the quality of your code. An acceptable threshold would be >= 7.00/10
